

SUPPLY CHAIN VULNERABILITY SCAN FOR SAP INTEGRATED BUSINESS PLANNING

IDENTIFY VULNERABILITIES AND MITIGATE SUPPLY CHAIN RISK

PREPARE YOUR BUSINESS FOR THE UNEXPECTED

A supply chain is a highly interconnected system that needs to be managed in ways that reduce costs, increase profits, and minimize risks. For each operation, you know there is a lot of uncertainty that can lead to a series of unknown problems farther down the line: stock outs, shutdowns, increased costs and more.

Similar to a computer anti-virus software, the Supply Chain Vulnerability Scan uses information you have in SAP IBP and scans your supply chain for weaknesses. By detecting risks early, you can mitigate the risks and manage them before a big disruption can happen. Just as you wouldn't use your computer without running a scan for viruses, you should not manage your supply chain without assessing how your supply chain will resist in times of disruption.

IDENTIFY

Scan your Supply chain for vulnerabilities and cascading effects of unforeseen disruptions.

ANTICIPATE

Automate thousands of goal seeking simulations to test all possible futures.

MITIGATE

Build resiliency and minimize revenue at risk with prescribed action plans.

SUPPLY CHAIN VULNERABILITY SCAN FOR SAP IBP

Secure your S&OP process from hidden hazards

Available on SAP Store, the Supply Chain Vulnerability Scan for SAP IBP is a go-to choice for supply chain leaders to profitably meet demand and accelerate their journey towards a more agile and resilient supply chain.

It is not just about managing risks, it's about conquering them before they even arise. Our solution represents the insurance policy for protecting operations and cutting down costs.

PEACE OF MIND POWERED BY AI SIMULATION

The Supply Chain Vulnerability scan is based on the most advanced AI-simulation technology. The use of simulation helps organizations make better decisions and simulate the evolution of complex environments even under conditions of increased uncertainty and complexity.

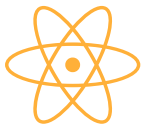

Like an in-vehicle GPS, it can guide organizations to their desired destinations using three elements:

Destination: your KPIs (supply chain resilience, optimized business operations, high service levels, profit...)

Map: a simulation twin of the entire supply chain (processes, resources, constraints, assets, costs)

Performance: automatic generation of thousands of goal-seeking simulations to reach business goals.

KEY BENEFITS

BUSINESS CONTINUITY

Maintain smooth operations within your supply chain to profitably meet customer demand.

REDUCE REVENUE AT RISK

Avoid the cost of disruptions and accelerate your journey towards a more agile and resilient supply chain.

CONFIDENT DECISION-MAKING

In-depth understanding of the impact of business decisions or disruptions on the entire supply chain network.

COMPETITIVE ADVANTAGE

Enhanced preparedness in the face of disruption to deliver maximum value to your customers.
